

Smart, patient-focused charting
for community care.

Proactive Care Addresses a Critical Gap

Community paramedicine is enabling fire and EMS organizations to go beyond their traditional role of responding to health care emergencies to provide care that helps prevent emergencies. It's proactive instead of reactive, addressing a critical gap. And it benefits everyone involved. This type of community care helps reduce early hospital readmissions, reduces the frequency of 911 calls from high utilizers, and helps educate patients with chronic illnesses to better manage their own care.

Many Visits, One Record—A Community Paramedicine First

With conventional ePCR systems you're blind to your patient's past. EMS Mobile Health is patient-centric instead of incident-centric and opens a window to the patient's history and previous caregiver notes.

EMS Mobile Health simplifies and expedites ongoing patient charting. The first solution for mobile integrated healthcare/community paramedicine, EMS Mobile Health allows you to securely access a patient's medical history and add new information.

"Because ZOLL EMS Mobile Health is web-based, physicians can access it to see how patients are progressing and if there are any red flags."

*Herman Rascon, IT Manager,
Golder Ranch Fire District, Arizona*

A Guided Path to Better Health Outcomes

With EMS Mobile Health, medics are guided through the charting process, with features that streamline each visit and support improved health care for patients.

Spend More Time with Patients and Less On Documentation

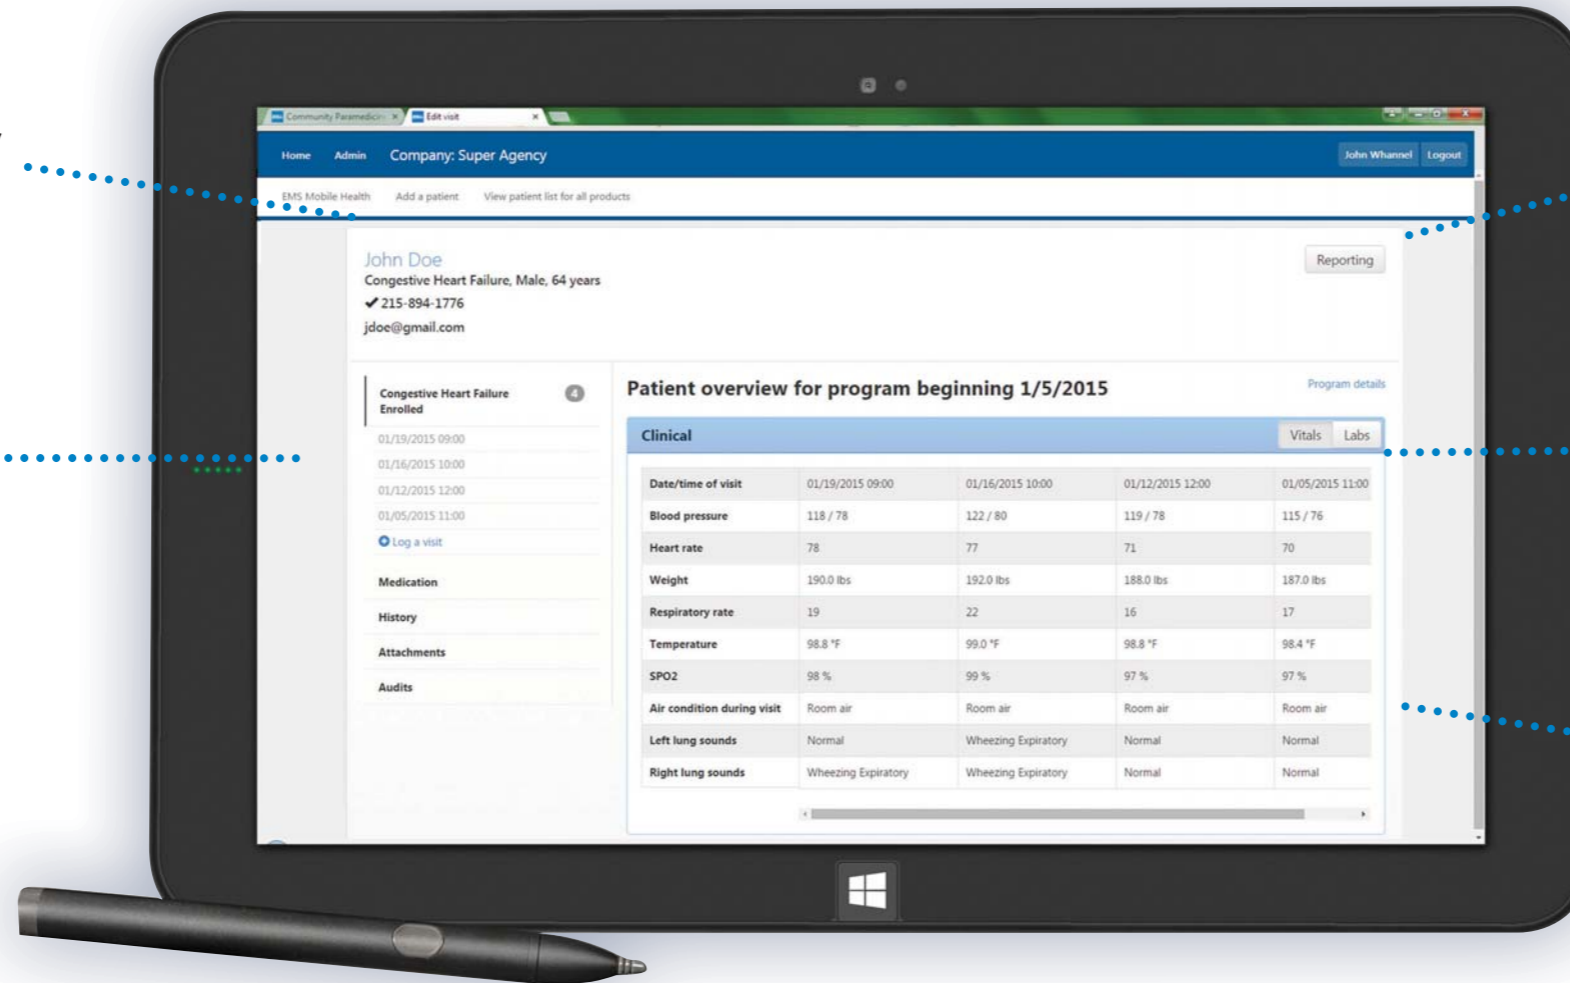

EMS Mobile Health helps organizations quickly scale their paramedicine programs to address the needs of their community. It offers real-time charting features that enable paramedics to see more patients and achieve more revenue while still maintaining quality of service.

See and set patient goals, review history of prior visits, and identify trends to tailor care with each new visit.

Quickly inventory a patient's medications to help prevent errors.

Share critical patient data with other healthcare partners.

Get automated alerts when vitals and lab values are out of normal range.

Provide an instant overview of new referrals, making it easy to manage caseloads and scale your program.

Community Paramedicine is an emerging field in healthcare where EMTs and Paramedics operate in expanded roles in an effort to connect underutilized resources to underserved populations.

When communities come together to improve healthcare, it is a win-win for everyone involved.

Everything you Need—Proven and Ready

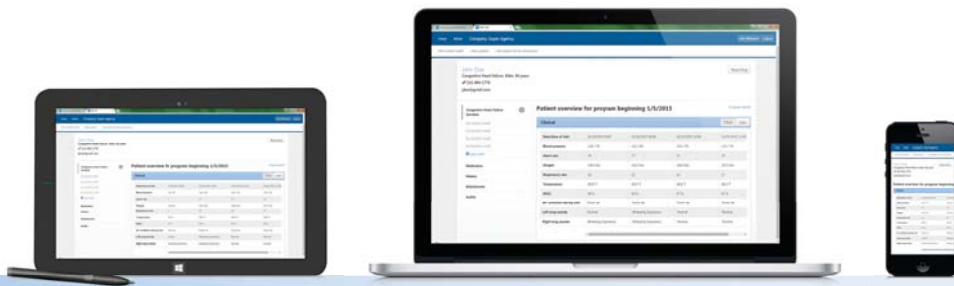

ZOLL EMS Mobile Health, developed in consultation with more than 20 agencies, is the first software built from the ground up to provide everything that community paramedics need.

Easy to get started

- Organizations can deploy EMS Mobile Health in less than a day.
- Because it's a cloud service, no servers or IT staff are needed.
- Sign on from any laptop, tablet, or phone with a browser and an Internet connection.

Easy to integrate

- EMS Mobile Health is built using common data standards (i.e. ICD-10, NEMESIS) so it can fit in smoothly with existing systems and processes.

"Before we started using EMS Mobile Health, our community paramedics were seeing about 6 patients a day and then taking a lot of information back to the office and struggling to get the charts done by the end of the shift. With EMS Mobile Health, we can add up to 2 to 4 patient visits a day because we can chart at the bedside. A paramedic can now see as many as 8 to 10 patients per day."

*Jake Beck, Community Paramedic Clinical Coordinator,
REMSA, Nevada*
